## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-2, 5, and 7, drawn to a Nuclear Myosin I  $\beta$  protein, classified in class 530, subclass 358.
  - II. Claims 3-4 and 6, drawn to an oligonucleotide and a cDNA molecule, classified in class 536, subclass 23.1.
  - III. Claims 8-11, drawn to an antibody, classified in class 530, subclass 387.1.
  - IV. Claim 12, drawn to a functional complex, classified in class 530, subclass 350.
  - V. Claims 13-15, drawn to a method of inhibiting cell proliferation by administering an antibody, classified in class 424, subclass 137.1.
  - VI. Claim 16, drawn to a method of inhibiting cell proliferation by administering a nucleic acid, classified in class 514, subclass 44.
  - VII. Claim 17, drawn to a method of screening for an agent that inhibits transcription, classified in class 530, 536, and 514, subclass 350, 23.1 and 12.

The inventions are distinct, each from the other because of the following reasons:

2. The Inventions of Groups I-IV (products) and V-VII (methods) are related as products and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products of Groups I-IV may be used in the methods of Groups V-VII, but may also be used for a number of different processes that are very much unrelated. For example, the antibody may be used for immunopurification, the protein for affinity purification of antibodies and the oligonucleotide may be used as a probe or vaccine.
3. The products of Groups I-IV are drawn to structurally and functionally different molecules with different immunological properties.

Art Unit: 1642

4. The methods of Groups V-VII relate to methods but each method differs in method steps, modes of operation, reagents needed and serve different endpoints and effects. For example, the methods of Groups VI-VII are drawn to inhibiting cell proliferation. However, proliferation is inhibited by administering different reagents, antibodies versus nucleic acids and achieved different modes of action. In addition, methods of inhibiting cell proliferation (Groups V-VI) have different endpoints and effects from a method of screening for an agent that inhibits transcription (Group VII).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, divergent subject matter, and require different search strategies, restriction for examination purposes as indicated is proper.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Applicant is advised that the response to this requirement, to be complete, must include an election of the invention to be examined even though the requirement be traversed.
